FALCON BRANDED APPLICATION EDITION

Private access as an application, not a coding project

Open setup wizard

Use the guided setup and launchers to activate Falcon, publish private apps, prepare gateways, enroll devices, and generate lab bundles.

View launchers

Application mode

Demo Application

Run Falcon as a local application through launchers, desktop shortcut installer, control center, guided setup, and in-app actions instead of developer commands.

Setup progress

6/7

86% complete

Launch address

http://127.0.0.1:5080fe

Use the launcher scripts instead of command hunting.

Safety guard

Controller and launcher do not change OS routes.

Setup path

STEP	STATUS	ACTION
Activate Falcon license	complete	Use production license activation bootstrap.
Create Account Owner	complete	Create the first owner from the demo.
Publish private apps	complete	Open Private Apps and add them to the app manager.

Application launchers

LAUNCHER	PLATFORM	FILE
Falcon Private Access App	Windows	FALCON_PRIVAT
Install Falcon as Local App	Windows	MAKE_FALCON_I
Start Falcon App	Windows	START_FALCON_

Status: lab-plan-ready

TEST CASE

Managed employee device opens HTTPS private app through connector.

Unmanaged external partner receives browser-only access and no tunnel route.

Broad route request 10.0.0.0/8 is rejected without account owner override.

DNS and IPv6 leak guard settings are present in generated profile.

Gateway apply plan can be rolled back from backup.

Connector mTLS attestation fails if certificate fingerprint is unknown.

Passkey preview rejects wrong challenge response.

Disabled member loses active sessions.

Expired vendor window kills access.

Hardening roadmap and evidence

CONTROL	STATUS	EVIDENCE
WireGuard first gateway model	configured	Gateway config endpoint and per-device peer model exist.
Private app access over broad LAN	configured	Resources and app segments default to deny.
Device posture policy	configured	Posture rules evaluate firewall, disk encryption, EDR, MDM, patch age, root/jailbreak.
Vendor access vault	configured	Time-bound vendor grants with recording and file-transfer controls.
Privileged SSH/RDP access	configured	Approval, expiry, recording, and command logging model.
Connector discovery approval	configured	Discovered private apps remain pending until approved.
SSO/OIDC/SAML/SCIM readiness	design-ready	Configuration endpoints exist; real IdP callback integration remains next phase.
DNS/Web protection	design-ready	Secure DNS, phishing and malware controls modeled.
Signed updates	configured-preview	Update manifest signature verification endpoint is included for release pipeline integration.
Falcon Agent preview	configured-preview	Agent enrollment, device passport, diagnostics, and WireGuard client profile generation are included.
Connector daemon preview	configured-preview	Connector heartbeat and discovery ingestion endpoints are included.
Native service plans	configured-preview	Windows, macOS, and Linux service plan generation is included, with rollback instructions.

Falcon Integration Readiness Plane

Falcon-only corporate VPN/ZTNA product model with optional external advisory integrations.

Version	0.7.0
Stage	integration-preview-needs-evidence
Blockers	3

Run Falcon boundary scan

Readiness checks

CHECK	STATUS
Falcon-only role taxonomy	ok
Deny-by-default policy posture	ok
Gateway plan exists	ok
Connector plan exists	ok
Agent plan exists	missing
License active	ok

Blockers

ITEM
At least one Falcon Agent enrollment is required
Identity provider contract has not been created
Falcon Agent installer manifest has not been created
