

Orama Web Shield

Buyer Proof Summary

Public-safe product proof pack generated from uploaded Cybstyx Phylaxis master guide and package inspection data. This is source-based buyer collateral, not a live-customer runtime certification.

Web and DNS security filtering, policy enforcement, URL reputation, internet control, and web evidence.

Category	Native DNS / Web / SASE Edge Security
Responsibility	Apply DNS and web controls with allow/block policy, override review, service health, reports, and audit evidence.
Standalone boundary	Filtering continues with cached policy if SecOwl or external reputation feeds are offline.
Authentication	Local RBAC with MFA; optional Eidon SSO; filtering service authentication.
Linked applications	Optional SecOwl adapter, Eidon identity, Nomion, Chronyx timeline, Tekmerion evidence, Keraunix response, Nyxara feeds, and Kleidion secrets.

Source Evidence Snapshot

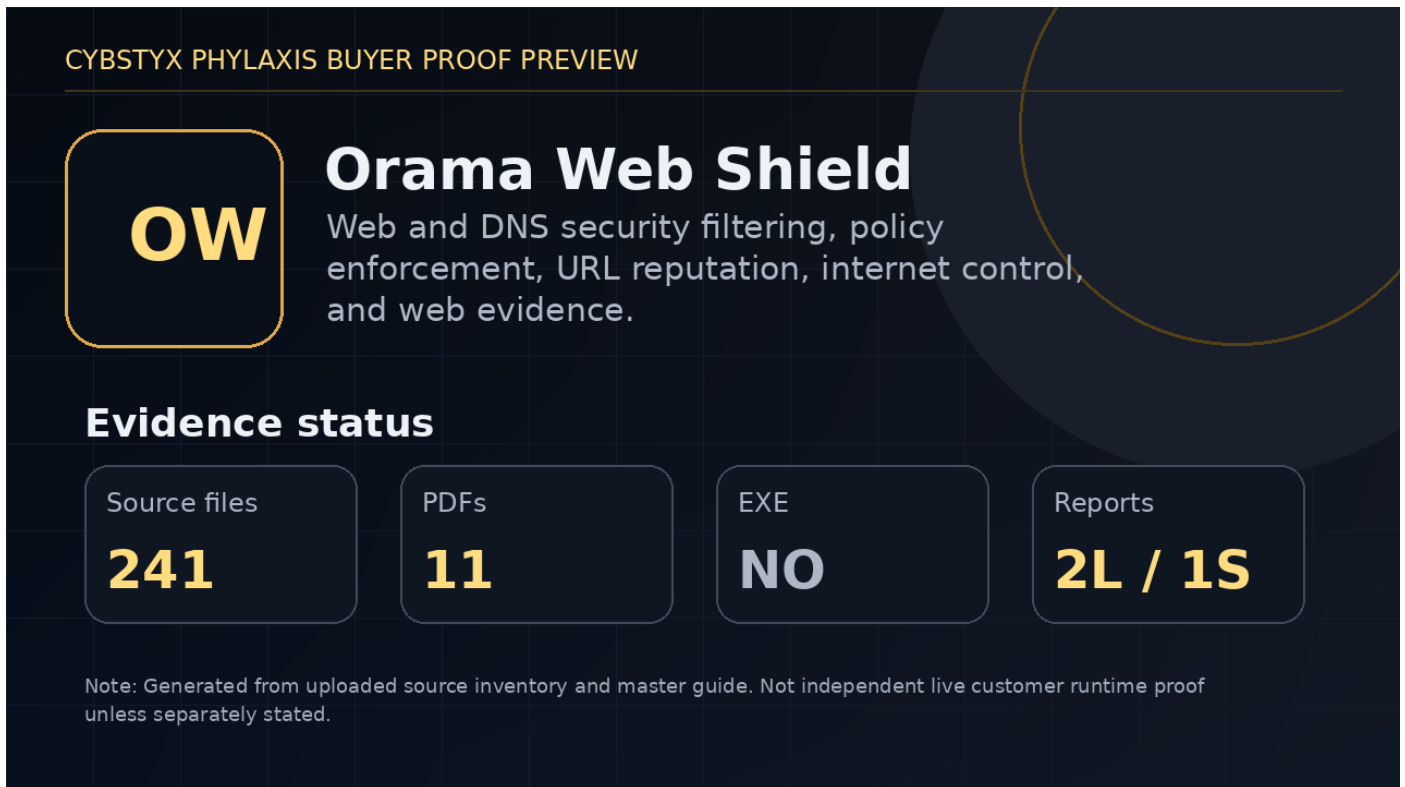

Source files inspected	241
PDF documents in package	11
Executable evidence found	NO / not found in root scan
Live/self-test reports referenced	2 live / 1 self-test
Language profile	Python, JavaScript, Java, PowerShell, Shell
Database/configuration modes	sqlite-native-production, postgresql-schema-ready

Core modules

<ul style="list-style-type: none">• DNS and web policy• Categories and allow/block lists• Reputation events• Override approvals• Proxy/DNS service health, reports, and audit

Visual Proof Preview

The image below is a generated buyer proof preview based on the uploaded source inventory and master guide. Use the separate contact sheet and MP4 preview for visual sales review.

Recommended buyer usage: share this pack as a source-backed capability and readiness brief. For production procurement, pair it with a live demo, customer environment scope, licence term, deployment checklist, and signed acceptance test.
